

**Safe and convenient**

Product developed for access management in condominiums, companies or other places where there are frequent entrances and exits.

TECHNICAL DRAWINGS**FEATURES**

- Device that allows you to conveniently open your garage door without the need for a physical key or transmitter. It consists of a numeric keypad that you can mount outside your garage, near the entrance.
- Easy to install: no wiring and surface mounting.
- Dual channel transmitter that is activated only after having entered a suitable combination. Allows you to control up to 2 products.
- Water proof. Designed for installation in indoor or outdoor locations.
- Protection against piracy: up to 8 digits per code
- The estimated transmission range up to 50m (the effective range depends on terrain and possible radio frequency interferences).
- Backlit keys.
