

**Small, Stylish and Robust**

Our transmitter is packed with advanced features, offering you a seamless and secure solution for controlling your garage door. With just a push of a button, you can effortlessly open or close your garage door, eliminating the need for manual effort or getting out of your vehicle in harsh weather conditions.

TECHNICAL DRAWINGS**FEATURES**

- Three-channel transmitter, rolling code technology, 433,92 MHz.
- LED Light
- Power Supply: 1 battery CR2032 3V
- Range: 80 - 100 m in open air (the effective range depends on terrain and possible radio frequency interferences).
- A transmitter can be programmed into any number of self-learning radio receivers, thus avoiding the use of different transmitters.
- Our transmitter is designed with energy-saving features, ensuring long-lasting battery life and reducing the need for frequent replacements.

ROLLING CODE**FEATURES**

- 281.000 billion code combinations
- rolling code technology: every time the transmitter sends a code, it generates a new code using an encoder. An algorithm identifies and validates only the signal of the transmitters encoded by the radio receiver

PROS

- virtually impossible to duplicate
- ideal for multi-user systems

PACKAGING

Package size: 43*19 *48 mm

Package weight: 0,019 Kg
